I agree, I just looked at it, let's start at the NE corner of the shed and head to the right of way. I informed Don to quote accordingly.

Nick:

Could you take a look at the fencing location? I am thinking that we should only place the fence at the northeastern corner of the shed and continue it along the property line to the city right of way which will be determined when we do the survey. I think this is about 165- 175 linear feet. I don't think that it will be good for us to put fencing on the eastern side of the building as it will prevent the homeowner from doing any repairs that he may need to do to the structure. What do you think?
